## Circumcision Clamps

Assisted by two haemostats or ligatures the foreskin is pushed over the bellshaped protection - rod and the glans is placed into it.
By now, the wing - nut is tightened as close as possible, so the foreskin in annular compressed. The foreskin is cut of with a scalpel, right nest to the compression ring.
The circumcision clamp remains a few minutes to avoid bleeding.In case that any large vein, specially the frenular artery, is cut through, a ligature must be set.
The advantage of the method described is the cosmeticly favourable scar which is left after rejection of the small necrotized portion.

**Special features:**
The construction of the open jaws avoids tiresome clogging by plaster remnants and allows furthermore an easy cleaning.
The shears do not glide off the plaster owing to the deep teething on the jaws.
The knives with hollow grinding have a better cutting ability and therefore less force is required.
The knives are guided by ball bearings.

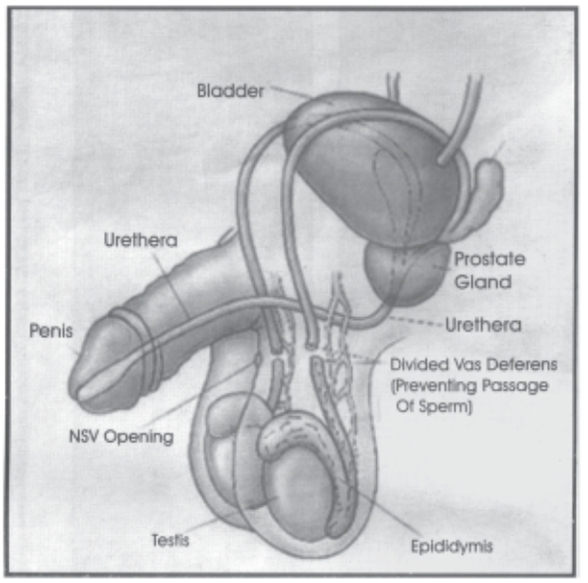
# VASECTOMY INSTRUMENTS

## MALE REPRODUCTIVE SYSTEM NO-SCALPEL VASECTOMY



### What Is a Vasectomy?

Vasectomy is the surgical interruption of the two tubes(vas deferens) that carry a man's sperm from his testicles to his ejaculatory ducts, where the sperm are stored before departure from his body during orgasm. VASECTOMY prevents sperm from being added to the man's ejaculation fluid (semen); therefore, he can no longer make a woman pregnant. The sperm containing fluid that is blocked by vasectomy constitutes only 3% of a man 's semen volume, therefore , a man will not notice any changes in his semen. Vasectomy is simply an effective, inexpensive, easy-to-perform method of contraception. Over 500,000 men in have had a Vasectomy in th UK.

### What Is the No-Scalpel Vasectomy (NSV)?

IT IS A SAFE minimally invasive procedure that reduces vasectomy's already low complication rate. The NSV was developed in China by Dr. Shunqiang Li in 1974 and introduced to the western world by AVSC International Dr Marc Goldstein of the Newyork-Presbyterian Hospital Cornell Medical Centre in 1985. Instead of cutting the scrotal skin, the skin is punctured and the vas id delivered with two special instruments. Over 15 millions men have undergone the NSV procedure worldwide since 1974. It is rapidly becoming the standard vasectomy technique in the United States.
